WORK EXPERIENCE

John Deere **Campinas, SP/Hybrid**

Senior Software Engineer Sep 2026 – Present

- Led a backend rewrite that made data processing and page load 30% faster.
- Deployed the new backend to AWS with improved autoscaling and monitoring, reducing infrastructure costs.
- Built the team's AI workflow with a code review agent, skills, and repository instructions, improving code quality.

Software Engineer II Dec 2022 – Aug 2026

- Rewrote much of the frontend in TypeScript and modern React, making it faster and easier to maintain.
- Integrated a microfrontend with Vite and Module Federation.
- Optimized data processing, eliminating freezes and loading data 3x faster for large customers.
- Changed the product roadmap by identifying limitations in a third-party table component.
- Mentored junior engineers and interns.

Software Engineer I May 2021 – Nov 2022

- Optimized a React data table, cutting load time by 50%.
- Built an Excel report generator in Python with automated email delivery through AWS.
- Migrated a Jenkins pipeline to GitHub Actions, making CI faster and more reliable.
- Built a voice assistant in Python using an AI model, placing 4th in the 2022 hackathon.

Samsung R&D **Campinas, SP/Remote**

Mobile QA Tester Intern July 2019 – Sept. 2020

- Built an automation tool that saved the team 40+ hours per month.
- Tested new flagship models for launch in Brazil.

Rheinmetall **Nova Odessa, SP**

Young Apprentice July 2010 – June 2012
